

Features

Air filter engineering original imported top quality filter element 98% voids volume provides long life time with lowest operating cost. Pleated media provides far more filter surface, therefore more dirt holding capacity, lower diff. pressure and lower running cost compare to conventional wrapped element designs.

A. Filter media: AFE uses high performance borosilicate microfiber with 98% void volume. The pleated design assures the highest possible filtration area within the element geometry to provide low operating cost.

B. End cap: An O-ring sealed alumina end cap for the highest possible operating temperature together with tie rod construction provides highest possible security against pressure spikes in the compressed air system.

C. Stainless steel support sleeves: Inner and outer SS support sleeves for supporting the filter media, incl. a mechanical pre-separation.

C - NF1EREPLACEMENT ELEMENT

GRADE

- C: Coarse Pre-filtration
- T: General filtration
- A: High performance filtration
- H: Activated carbon filter

Operating scope:
Max. operating temp: 60°C(High temp. is also available)
Max. differential pressure: 0.6barG Material: Ported: • Aluminum • Flanged: Carbon steel Optional: • Auto drain: "D" (Pressure is higher than 10 barG needs prior notice) • Differential pressure gauge:"G" Customize: • Stainless steel: "P" • High pressure: H1(11~20barG); H2(21~30barG); H3(31~40barG); H4(41~50barG)

Element Replacement: Replace every 1 year or earlier if the differential pressure gauge changes to red. Activated carbon elements

should be changed after 1000 hours operation. All filter elements only guaranteed under operating scope. Ordering Example: AH High efficiency oil removal filter with a max. capacity of 30Nm3/min, internal auto drain and differential pressure gauge. would be configured as : MJL-AH-200L-D-G. A-NL1E for element model. (Equip with "D" or "G". MJF series model number printed on name plate without -D-G, MJL series model number with -D-G)

Application

Note: 1. Grade TU filters after desiccant air dryer is for particle removal. Must be installed reversely and auto drain is unnecessary. 2. Grade HC filters is for oil vapor and odor removal. Auto drain and differential pressure gauge are not required.
